

Go to <http://bit.ly/busline>.

Click on “Basemap” and select “Imagery.”

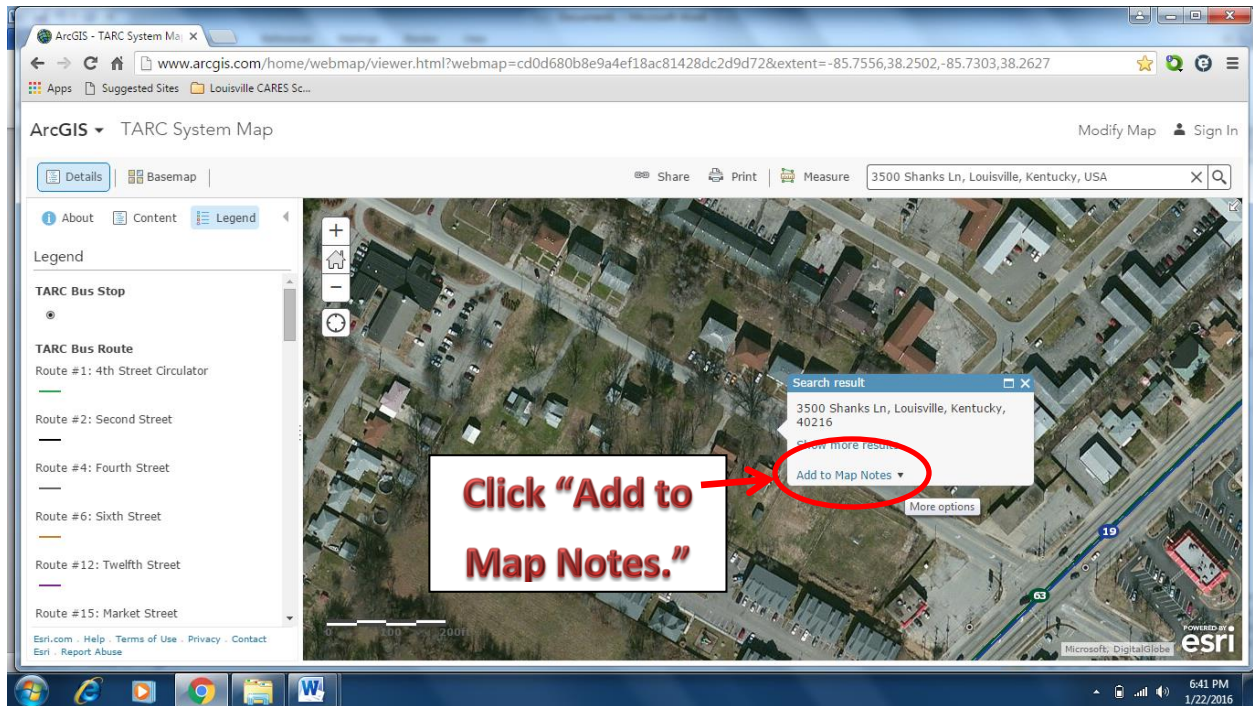

Enter address.

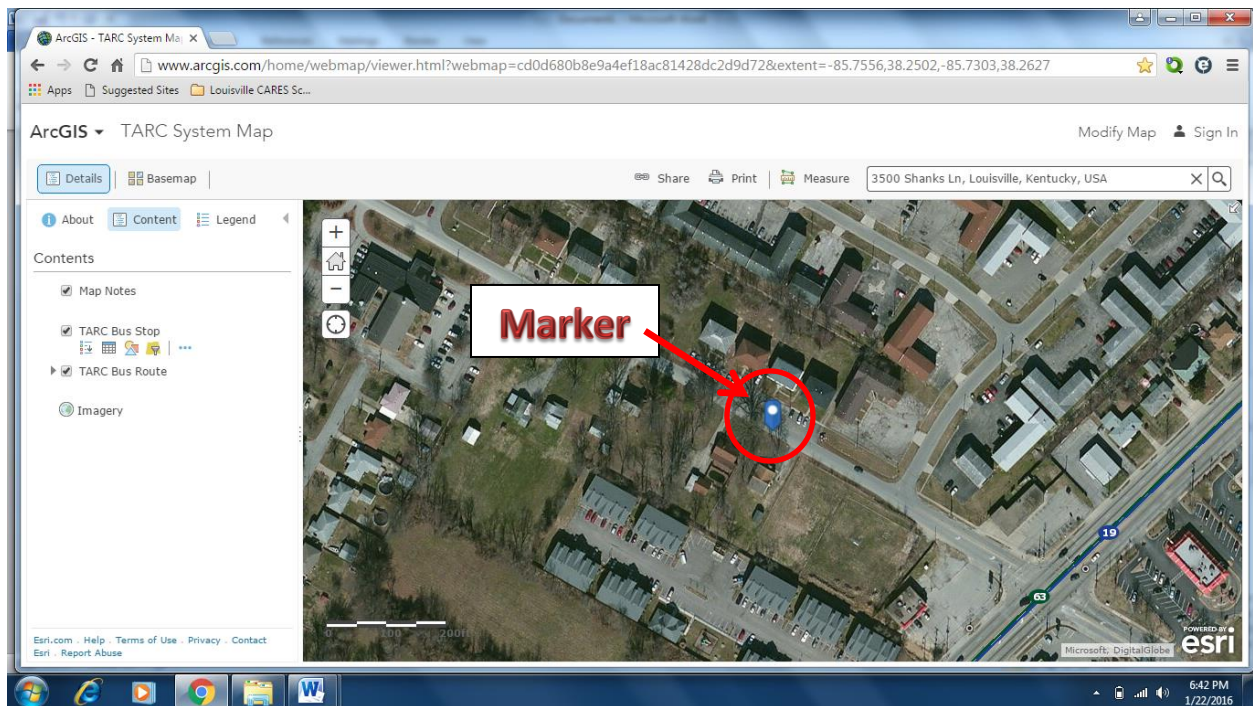

Click on “Add to Map Notes.”

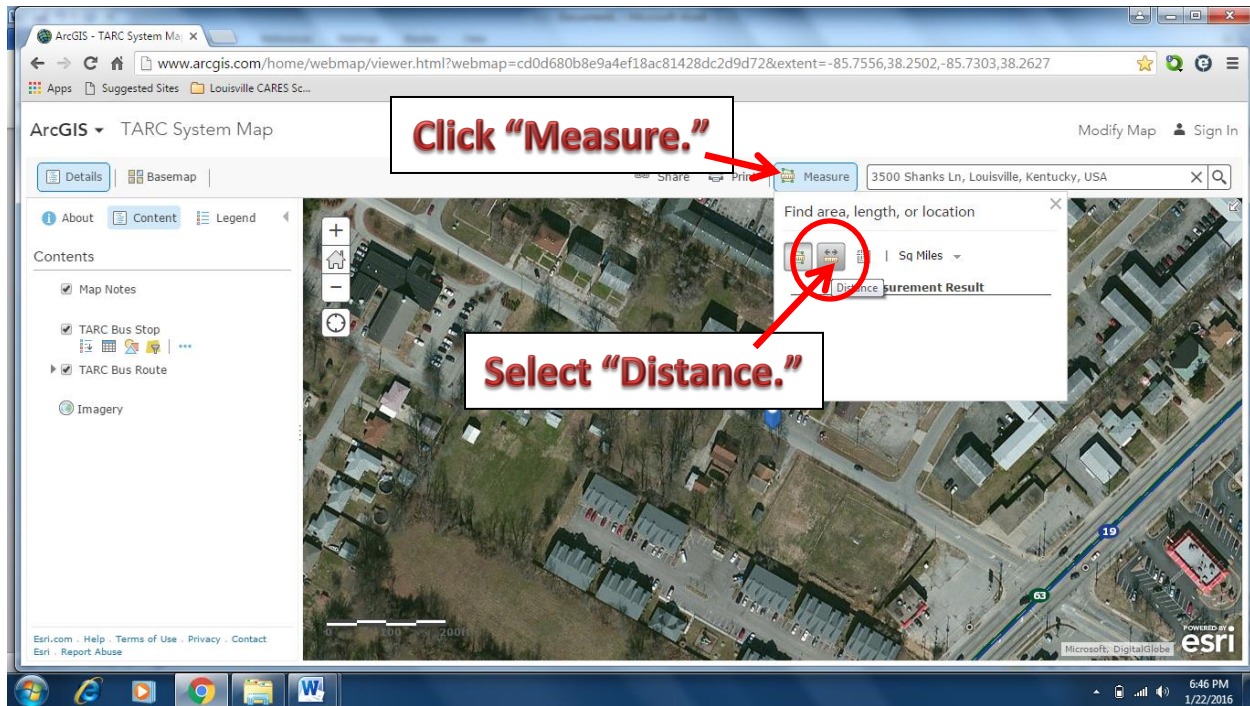

A marker will appear on the map marking the location.

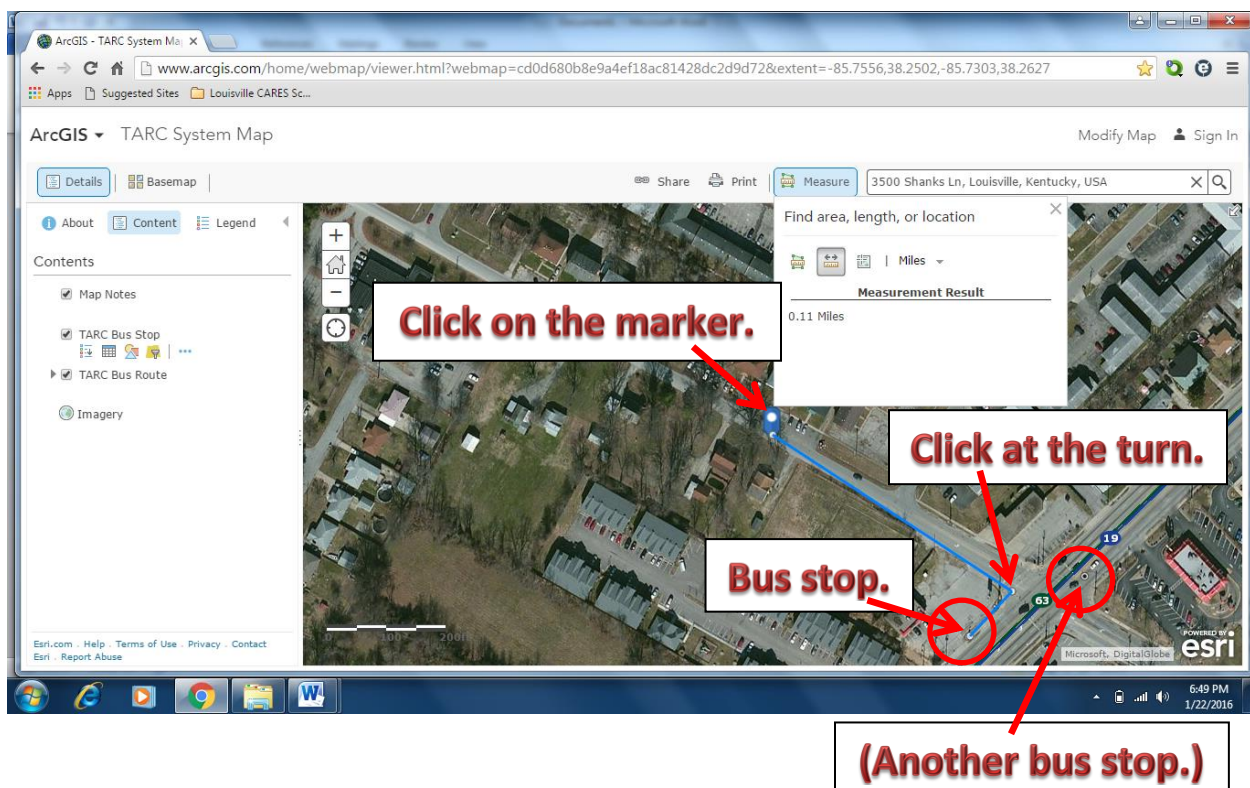

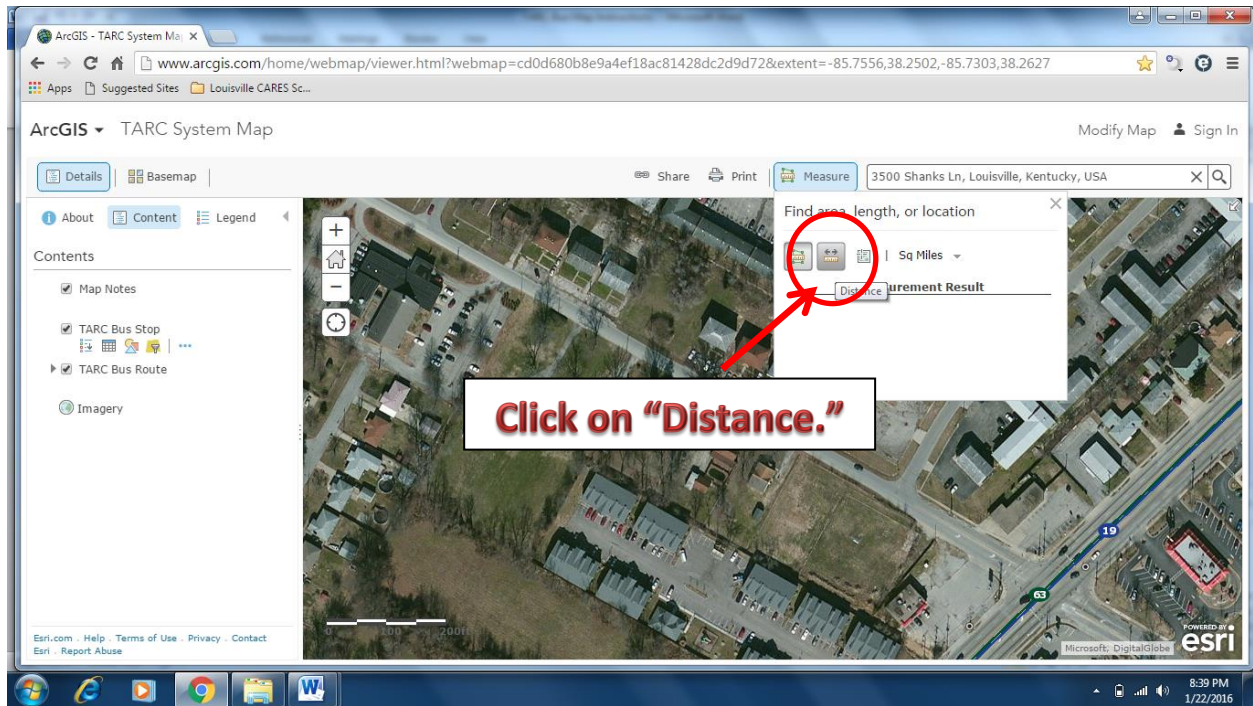

Click on measure and select distance.

Click on the marker and drag a line along the sidewalk, or the side of the road if a sidewalk is not present, to indicate the path that someone will walk to the bus stop. If there is a turn, click at the turn and continue your line to the bus stop. The bus stops are black dots on the map.

If you mess up and need to start over, click on Distance and your line will disappear. Then, start the process again.

The map will measure the distance from your location to the bus stop. Take a screen shot and upload it to the application.
